About

Full Stack Developer with 4+ years of experience in designing, developing, and implementing applications. Seeking a challenging role to leverage my expertise in software development.

Technical Skills

Programming Languages: JavaScript, TypeScript, Java 8/17, Python, C++.

Frontend/Backend Technologies: ReactJS, HTML, CSS, Angular 16/17 Spring Boot, NextJS, NodeJS, ExpressJS.

Databases/Cloud: MongoDB, MySQL, Redis, AWS, Azure, GCP.

Tools/DevOps: Docker, Kubernetes, Kafka, CI/CD, GitHub, Jenkins, VSCode, IntelliJ IDEA, Workbench, DBeaver.

Others: OOPs, Multithreading, Collections API, Design Patterns, Microservices, SonarQube, Agile Methodology.

Experience

Associate Consultant, CAPGEMINI – Bengaluru, India

Jan 2024 – Feb 2025

- Developed scalable, secure microservices using **Java**, **Spring Boot**, and **Spring Cloud**.
- Designed and maintained **REST APIs** with versioning, request validation, and structured logging; consumed via **React** frontend.
- Integrated **Kafka** for asynchronous messaging between distributed services.
- Worked with relational databases (**MySQL**, **PostgreSQL**) and optimized queries for performance.
- Managed caching with **Redis** and applied TTL strategies for transient data.
- Monitored services using **Splunk**, **Grafana**, and **AppDynamics** for health metrics and log analysis.
- Deployed applications on **AWS (EC2, ECS, S3, IAM, RDS)**; followed CI/CD best practices.

Senior Software Engineer / Analyst, CAPGEMINI – Bengaluru, India

Aug 2022 – Dec 2023

- Migrated legacy systems to cloud-native architectures using **Spring Boot**, **Spring Cloud**, and **Netflix OSS**.
- Improved API throughput by 30% via profiling, load testing, and SQL query optimization.
- Designed resilient systems with **Resilience4j** (retry, circuit breaker) and fallback mechanisms.
- Used **Swagger** for API documentation and contract testing with QA teams.
- Setup dashboards and alerts using **Splunk**, monitored production flows via **AppDynamics**.
- Troubleshoot production issues using **ServiceNow**, AWS logs, and **Log4j** traces.
- Automated deployments via Jenkins, Docker, and AWS ECS pipelines.

Software Engineer / Analyst, CAPGEMINI – Bengaluru, India

Jun 2021 – Jul 22

- Built backend APIs for dining reservations using **Spring Boot** and managed data via **MySQL**.
- Implemented reservation logic, time slot validations, and dining availability features.
- Wrote unit and integration tests with **JUnit**, **Mockito**; maintained high test coverage.
- Participated in sprint ceremonies, backlog grooming, and peer code reviews.
- Traced slow-performing transactions using **AppDynamics** and optimized SQL queries.
- Monitored logs and resolved production issues via **Splunk**, **CloudWatch**, and post-deployment validation.

Projects

Ticketing System

Jan 2024 – Feb 2025

Role: Associate Consultant

Client: Walt Disney World Resort

Tech: Java, Spring Boot, Spring Cloud, Spring Security, RabbitMQ, Kafka, React, MySQL, AWS, Splunk, Grafana

Description: Backend ticketing system to manage guest profiles, tickets, and real-time validations.

Responsibilities:

- Built secure REST APIs using Spring Boot and JWT-based Spring Security.

- Used RabbitMQ for async POS communication and Spring Cloud for service migration.
- Monitored logs and metrics using Splunk and Grafana with alerting.
- Refactored legacy code into scalable, fault-tolerant microservices.
- Handled global exception handling and request validation.
- Developed React UI for guest and ticket modules;
- Integrated Kafka for event streaming.
- Set up CI/CD with Jenkins and AWS CodeDeploy for automated deployments.

Hotel Booking App

Aug 2022 – Dec 2023

Role: Sr. Software Engineer/Analyst

Client: Disneyland Paris

Tech: Java, Spring Boot, React, MySQL, Redis, Resilience4j, Swagger, AWS

Description: Hotel and dining reservation platform with third-party integrations and a React-based frontend.

Responsibilities:

- Developed REST APIs in Spring Boot for bookings, availability, and guest preferences; consumed on React frontend.
- Integrated Expedia APIs to sync real-time availability and booking flows on UI.
- Used Redis caching and Resilience4j for circuit breakers and retries.
- Built dynamic and responsive UI in React for booking and guest workflows.
- Deployed services on AWS (ECS, EC2, S3, RDS) with autoscaling and monitoring.
- Designed and optimized DB schema for reservation modules using native SQL.
- Managed environment-specific configs and React '.env' setups for deployments.

Dining Reservation System

Jun 2021 – Jul 22

Role: Software Engineer/Analyst

Client: Walt Disney World Resort

Tech: Java, Spring Boot, MySQL, Splunk, AppDynamics

Description: Backend system to manage dining reservations across Disney resorts.

Responsibilities:

- Developed dining reservation APIs with Spring Boot and configured MySQL for persistence.
- Wrote unit and integration tests using JUnit and Mockito; ensured proper coverage.
- Participated in sprint ceremonies, code reviews, and functional refinement meetings.
- Used AppDynamics to trace slow transactions and improved query performance.
- Supported production issue resolution and log analysis using Splunk and CloudWatch.

Deals & Coupon Web App

Jan 2021 - May 2021

Role: Intern/Trainee

Client: Capgemini

Tech: Java, Spring Boot, Angular 12, MySQL, JPA, Swagger, AWS

Description: Full-stack web app for users to browse, save, and redeem coupons/deals.

Responsibilities:

- Built RESTful APIs for coupon listing, filtering, and redemption with Spring Boot and JPA.
- Developed frontend in Angular 12 using reactive forms and modular components.
- Secured endpoints and validated input data at controller and DTO levels.
- Deployed app on AWS EC2, configured S3 bucket for static assets, and used Git for version control.
- Used Postman for API testing and integrated Swagger UI for documentation and QA support.
- Added error handling and fallback logic for external service failures.

Chatty - Real-Time Chat App (MERN Stack)

Jan 2025 - Feb 2025

Role: Full Stack Developer

Client: Personal Project

Tech: MongoDB, Express.js, React.js, Node.js, WebSocket, Zustand

Description: Real-time chat application enabling seamless messaging between users.

Responsibilities:

- Built backend using Node.js and Express with MongoDB for secure message and user data storage.
- Implemented WebSocket-based communication for low-latency, real-time messaging.
- Used Zustand for global state management to ensure fast and consistent UI updates.
- Structured scalable event-driven architecture to optimize performance for multiple concurrent users.

- Ensured authentication and input validation for secure user access and chat management.

GeoTag - Waste Classification & Geotracking App (MEAN Stack)

Dec 2021 - Jan 2022

Role: Full Stack Developer

Client: Personal Project

Tech: MongoDB, Express.js, Angular, Node.js, Firebase, Azure Vision API, MapMyIndia API

Description: Web app for real-time waste tracking and classification across 500+ zones.

Responsibilities:

- Integrated Azure Vision API to classify waste with 95%+ accuracy.
- Used Firebase for real-time data storage and user authentication.
- Leveraged MapMyIndia API to track zones and generate alerts for high-waste areas.
- Built UI with Angular using component-driven architecture and real-time data binding.
- Designed an alert system for timely municipal actions based on waste accumulation patterns.

Education

Lovely Professional University

Jul 2017 – Aug 2021

- B.Tech in Computer Science Engineering - **CGPA: 6.74/10**

Certifications and Awards

- AWS Certified Solution Architect - Associate (**VALIDATION NUMBER: DJM08KCL5FR41CKH**).
- Organized a 3-day hackathon, MSHack2.0, at LPU Punjab with over 150+ teams from all over India.
